

tapl::cve::computeEssential  
Matrix

tapl::cve::computeFundamental  
Matrix

tapl::cve::computeRelativePose

tapl::DataFrame::getKpts  
Matches

```
graph LR; A[tapl::cve::computeEssential Matrix] --> D[tapl::DataFrame::getKpts Matches]; B[tapl::cve::computeFundamental Matrix] --> D; C[tapl::cve::computeRelativePose] --> D;
```

The diagram illustrates a dependency or data flow. On the left, three rectangular boxes are stacked vertically. Each box contains a function name from the `tapl::cve::` namespace. Arrows from the right side of each of these three boxes point towards a single rectangular box on the right. This box, which has a light gray background, contains the function `tapl::DataFrame::getKptsMatches`. The arrows indicate that the three functions on the left are inputs or dependencies for the function on the right.
